

ETF FACTOR ROTATION PROJECT

Monthly Analytical Factsheet — Performance Summary

As of 30/06/2026

Key Data

Reporting date:
30/06/2026

Data cutoff:
30/06/2026

Comparable sample:
01/02/2017 to 30/06/2026

Frequency:
Daily ETF returns, monthly model rebalancing

Document type:
Academic portfolio analytics factsheet

Objective

This factsheet summarizes a Python-based ETF factor rotation project.

The project analyzes the cyclicalities of Value, Momentum, Quality and Low Volatility ETF exposures.

The active portfolio uses a transparent benchmark-relative allocation framework rather than a predictive trading model.

ETF Universe

Factor ETFs:
VLUE for Value, MTUM for Momentum, QUAL for Quality and USMV for Low Volatility

Benchmark:
ITOT

Multifactor comparator:
LRGF

Cumulative Performance

Main Metrics — Annualized Over Comparable Sample

Strategy	Ann. Return	Ann. Vol.	Sharpe	Max DD	Calmar	Corr.
ITOT	14.78%	18.67%	0.79	-35.00%	0.42	100.00%
LRGF	13.39%	18.69%	0.72	-36.03%	0.37	98.31%
Equal-Weight	14.73%	17.68%	0.83	-34.98%	0.42	97.92%
Active	16.69%	18.69%	0.89	-33.61%	0.50	92.48%

Trailing Total Returns

Strategy	YTD	1M	3M	1Y	3Y	Since Start
ITOT	11.01%	-0.47%	19.08%	22.99%	74.53%	264.68%
LRGF	9.49%	-0.84%	18.24%	19.32%	76.46%	225.19%
Equal-Weight	23.78%	3.12%	28.28%	35.11%	90.99%	263.08%
Active	39.50%	0.91%	39.52%	57.23%	114.96%	325.76%

Automated Interpretation

Over the comparable sample, the active portfolio delivered 16.69% annualized return versus 14.78% for ITOT, with a Sharpe ratio of 0.89 versus 0.79.

Versus ITOT, the return difference was +1.91%, the Sharpe difference was +0.10, the volatility difference was +0.02% and the maximum drawdown improvement was +1.39%.

The active portfolio ranked first on annualized return, Sharpe ratio, Calmar ratio and maximum drawdown profile among the compared strategies. These results should be read as historical portfolio analytics, not as evidence of predictive market timing.

Monthly Analytical Factsheet — Allocation and Methodology

As of 30/06/2026

Monthly Active Weights

Month-End Allocation

Exposure	Weight
Value	80.0%
Benchmark	20.0%

Model allocation signal as of the reporting date.

Strategy vs Comparators

Comparator	Return Diff.	Vol. Diff.	Sharpe Diff.	DD Improv.
ITOT	1.91%	0.02%	0.10	1.39%
LRGF	3.30%	0.00%	0.18	2.42%
Equal-Weight	1.96%	1.01%	0.06	1.37%

Methodology

Active score:	benchmark-relative composite score based on Information Ratio, Sharpe advantage, volatility advantage and drawdown advantage
Selection rule:	factors are selected only when their active characteristics are positive
Weighting rule:	positive scores are normalized into weights, capped at 80% per factor, with residual allocation assigned to the benchmark

Factor Cyclicity — Rolling Excess Returns vs Benchmark

Important Notes and Limitations

This factsheet is not an investment recommendation, not a fund marketing document and not a trading signal.
Results are historical and do not fully include transaction costs, taxes, bid-ask spreads or all implementation frictions.
ETF proxies are imperfect representations of academic factors, and past performance does not indicate future results.
